Sony's new XCL Series features four cameras equipped with a digital video interface that conforms to the Camera Link® industry standard. These new cameras enable the capture of high-speed, high-resolution images while simplifying connectivity to machine-vision systems with its 3M MDR 26-pin cable.

The XCL-U1000 and XCL-U1000C cameras incorporate a 1/1.8-type progressive scan CCD that produces detailed, UXGA resolution images (1,600 x 1,200 pixels). In addition, the XCL-U1000C camera uses a CCD with a color "mask" (commonly called a "Bayer filter") and a DSP to provide uncompressed, high resolution, digital color images and a direct VGA display output option.

The XCL-V500 and XCL-X700 cameras feature a 1/3-type progressive scan CCD that captures high-quality monochrome images at a high frame rate, designed in a compact and lightweight body.

All models incorporate a variety of convenient features such as partial scan and external trigger function allowing for the clear capture of fast moving objects or still images in low light environments.

Combining high resolution, high performance, compact design and a wide range of feature-rich functions, Sony's XCL Series are the ideal solution for today's wide range of machine vision applications.
